(57) Abstract: The object of the present invention is a process for raising the temperature of a cosmetic product (1), in particular a skin care or hair care product, the product being placed on or in a carrier (2), for example impregnated on a carrier of this kind. The rise in temperature is obtained by an external heat source, for example by microwave radiation. The carriers concerned are for example wipes, patches, or any other material capable of holding the product and of being heated in a microwave oven.
